

AYUSHI YADAV

Ghaziabad, India | P: +91 97737 30222 | ayushi.work007@gmail.com | github.com/ayushi-work | linkedin.com/in/ayushi-yadav-a13683242/

PROFESSIONAL SUMMARY

Cloud & DevOps engineer building observable, self-healing infrastructure on Kubernetes and AWS. Go, Python, and Terraform. AWS CloudOps and Data Engineer certified. Active open-source contributor to the cloud-native ecosystem.

OPEN SOURCE CONTRIBUTIONS

[prometheus/alertmanager](#)

Aug 2026

- Refactored Prometheus Alertmanager notifier configuration by extracting validation into independent `Validate()` methods across all 22 notifier types, enabling cleaner error aggregation and future configuration improvements.

[kgateway](#)

Jun 2026

- Fixed a production bug in Kubernetes Gateway API Frontend TLS certificate validation for cross-namespace ListenerSets and strengthened test coverage to prevent regressions in multi-tenant TLS configurations.

[argoproj/argo-cd](#)

Jun 2026

- Resolved 12+ CVEs in Argo CD by upgrading vulnerable Go dependencies, validating compatibility with go build and govulncheck, and fixing CI issues through maintainer-reviewed PRs.

[x402-OPEN](#)

Oct 2025

- Provisioned and deployed the full application stack on AWS EC2 with public access, ensuring runtime stability on Linux-based servers.
- Configured the deployment environment end-to-end; security groups, networking, environment variables, and Git-based deployment workflows on Ubuntu.

PROJECTS

[POLARIS](#) - Kubernetes Incident Simulation & Self-Healing Platform

May 2026

- Developed a Kubernetes incident management platform that injects controlled failures, correlates telemetry across logs, metrics, and traces, and generates AI-assisted incident reports.
- Engineered automated recovery mechanisms including deployment restarts, rollbacks, and scaling actions using Go, Kubernetes APIs, Prometheus, Grafana, and OpenTelemetry.

[REMEDiate](#) - Automated DevOps Incident Response System

Nov 2025

- Built an end-to-end automated incident response pipeline: ingests application logs and Prometheus metrics, classifies incidents via LLM-based analysis (LangGraph + AWS Bedrock), and triggers pre-defined remediation playbooks.
- Deployed the full system on Kubernetes with Prometheus alerting rules, Grafana dashboards for real-time observability, and Helm for package management.
- Designed self-healing infrastructure that reduces manual intervention for common failure patterns.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript

Cloud & Infra: AWS (EC2, Bedrock, SageMaker, CloudWatch, CloudTrail), Linux, Docker, Kubernetes, Terraform

CI/CD & GitOps: GitHub Actions, Jenkins, Argo CD, Helm

Observability: Prometheus, Grafana, OpenTelemetry

Web: React, Next.js, HTML, CSS, JavaScript

EDUCATIONAL QUALIFICATIONS

KIET GROUP OF INSTITUTIONS

Ghaziabad, India

Bachelor of Technology (Information Technology)

Expected Sep 2028

Cumulative GPA: 8.11

CERTIFICATIONS AND OTHER ACHIEVEMENTS

SOA-C03: AWS CloudOps Engineer - Associate

DEA-C01: AWS Data Engineer - Associate

CLF-C02: AWS Cloud Practitioner - Foundation

AIF-C01: AWS AI Practitioner - Foundation

Cisco Networking Essentials

IBM Basics of Quantum Information

LFS101: Introduction to Linux
